

NAME

bload - write on block device

SYNOPSIS

/etc/bload dev blockno [filename]

DESCRIPTION

Bload seeks to the specified block on the specified device and copies one 512-byte block onto the device. *Bload* prepends '/dev/' onto the front of the *dev* argument and attempts to open the device for writing. The *blockno* argument is assumed to be octal if it contains a leading zero, otherwise decimal.

FILES

dtmpx

SEE ALSO

bdump(1M)

DIAGNOSTICS

dev? - The device cannot be opened.

non - numeric character -- the *blockno* argument contains a bad character

destination file? -- "dtmpx" or *filename* cannot be created in the current directory
